

# High frequency operational amplifier

## NE/SE5539

### DESCRIPTION

The NE/SE5539 is a very wide bandwidth, high slew rate, monolithic operational amplifier for use in video amplifiers, RF amplifiers, and extremely high slew rate amplifiers.

Emitter-follower inputs provide a true differential input impedance device. Proper external compensation will allow design operation over a wide range of closed-loop gains, both inverting and non-inverting, to meet specific design requirements.

### FEATURES

- Bandwidth
  - Unity gain - 350MHz
  - Full power - 48MHz
  - GBW - 1.2GHz at 17dB
- Slew rate: 600V/ $\mu$ s
- $A_{VOL}$ : 52dB typical
- Low noise - 4nV/ $\sqrt{\text{Hz}}$  typical
- MIL-STD processing available

### APPLICATIONS

- High speed datacom
- Video monitors & TV

### PIN CONFIGURATION

- Satellite communications
- Image processing
- RF instrumentation & oscillators
- Magnetic storage
- Military communications

### ORDERING INFORMATION

DESCRIPTION	TEMPERATURE RANGE	ORDER CODE	DWG #
14-Pin Plastic Dual In-Line Package (DIP)	0 to +70°C	NE5539N	0405B
14-Pin Plastic Small Outline (SO) package	0 to +70°C	NE5539D	0175D
14-Pin Ceramic Dual In-Line Package	0 to +70°C	NE5539F	0581B
14-Pin Ceramic Dual In-Line Package	-55 to +125°C	SE5539F	0581B

### ABSOLUTE MAXIMUM RATINGS<sup>1</sup>

SYMBOL	PARAMETER	RATING	UNITS
$V_{CC}$	Supply voltage	$\pm 12$	V
$P_{DMAX}$	Maximum power dissipation, $T_A = 25^\circ\text{C}$ (still-air) <sup>2</sup>		
	F package	1.17	W
	N package	1.45	W
	D package	0.99	W
$T_A$	Operating temperature range		
	NE	0 to 70	°C
	SE	-55 to +125	°C
$T_{STG}$	Storage temperature range	-65 to +150	°C
$T_J$	Max junction temperature	150	°C
$T_{SOLD}$	Lead soldering temperature (10sec max)	+300	°C

#### NOTES:

- Differential input voltage should not exceed 0.25V to prevent excessive input bias current and common-mode voltage 2.5V. These voltage limits may be exceeded if current is limited to less than 10mA.
- Derate above 25°C, at the following rates:
  - F package at 9.3mW/°C
  - N package at 11.6mW/°C
  - D package at 7.9mW/°C

## CIRCUIT LAYOUT CONSIDERATIONS

As may be expected for an ultra-high frequency, wide-gain bandwidth amplifier, the physical circuit is extremely critical.

Bread-boarding is not recommended. A double-sided copper-clad printed circuit board will result in more favorable system operation. An example utilizing a 28dB non-inverting amp is shown in Figure 1.

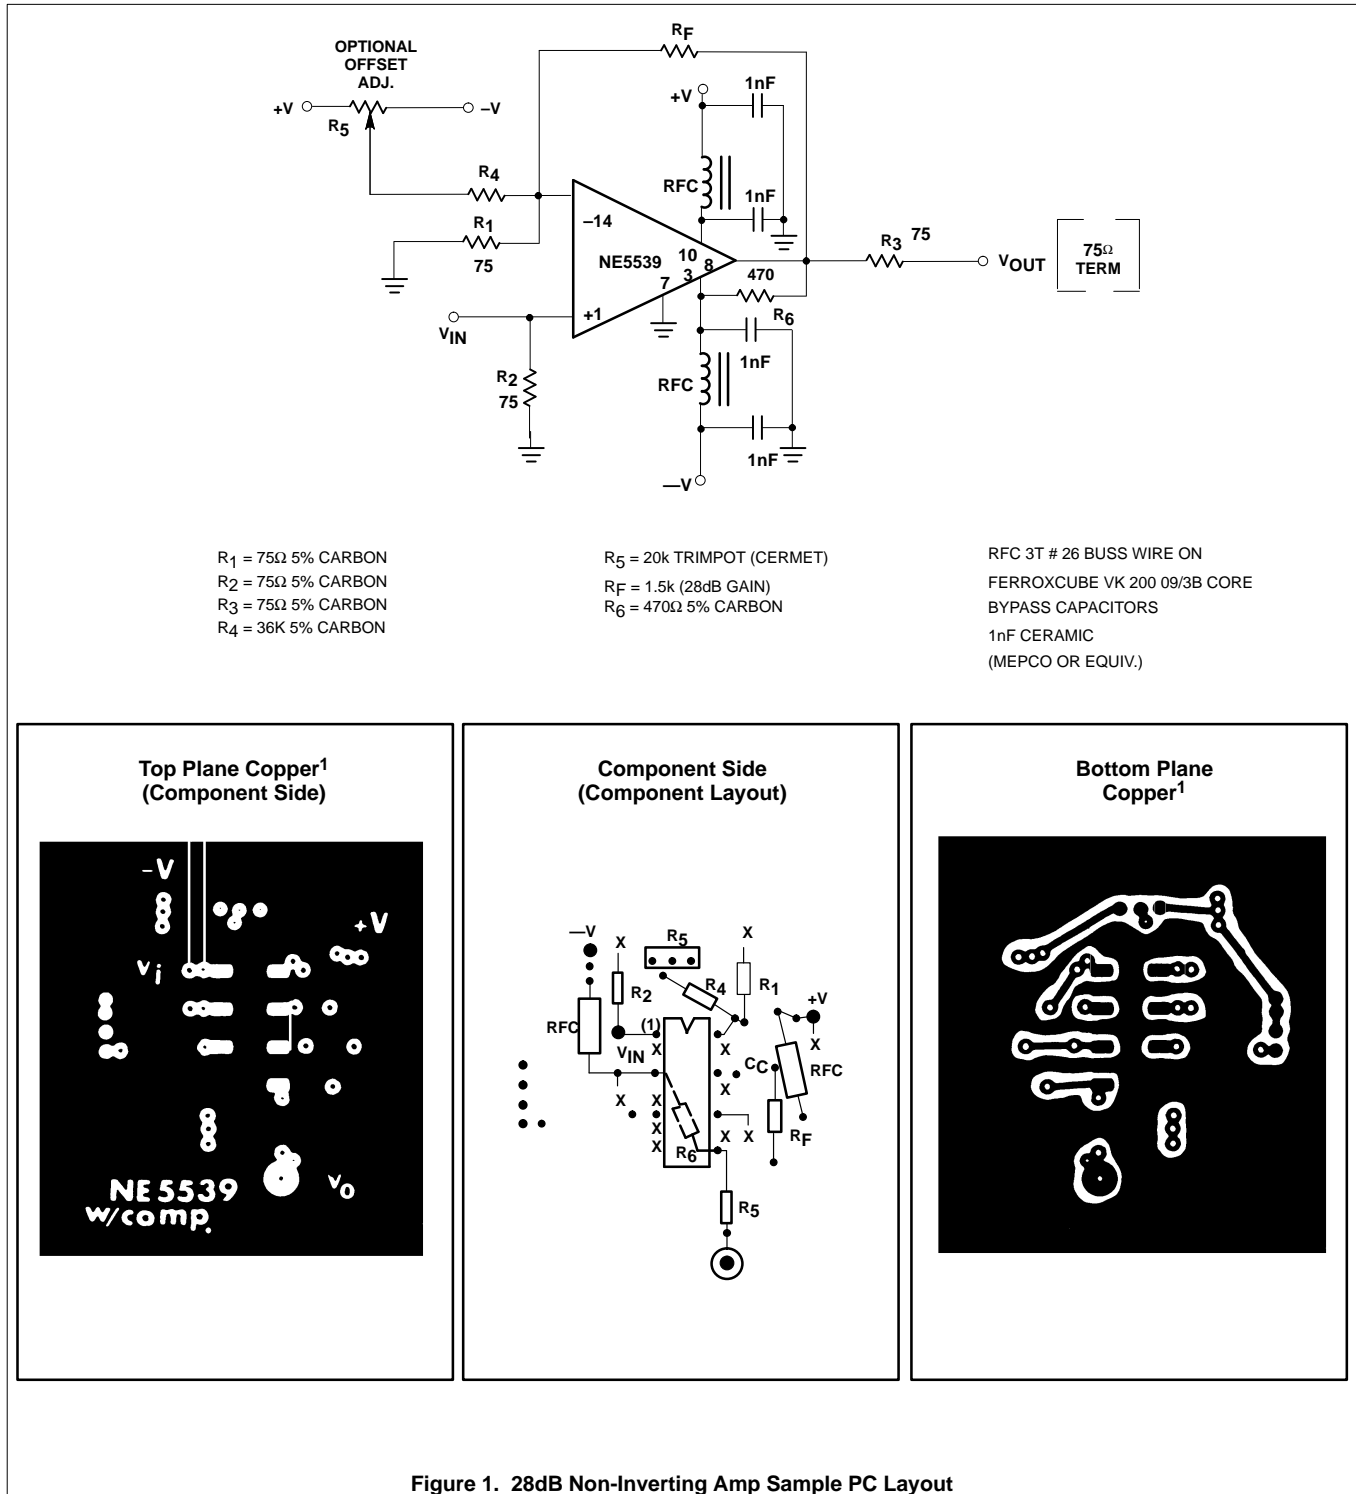

Figure 1. 28dB Non-Inverting Amp Sample PC Layout

## NE5539 COLOR VIDEO AMPLIFIER

The NE5539 wideband operational amplifier is easily adapted for use as a color video amplifier. A typical circuit is shown in Figure 2 along with vector-scope photographs showing the amplifier differential gain and phase response to a standard five-step modulated staircase linearity signal (Figures 3, 4 and 5). As can be seen in Figure 4, the gain varies less than 0.5% from the bottom to

the top of the staircase. The maximum differential phase shown in Figure 5 is approximately  $+0.1^\circ$ .

The amplifier circuit was optimized for a  $75\Omega$  input and output termination impedance with a gain of approximately 10 (20dB).

**NOTE:**

1. The input signal was 200mV and the output 2V.  $V_{CC}$  was  $\pm 8V$ .

Figure 2. NE5539 Video Amplifier

Figure 3. Input Signal

Figure 4. Differential Gain <0.5%

**NOTE:**

Instruments used for these measurements were Tektronix 146 NTSC test signal generator, 520A NTSC vectorscope, and 1480 waveform monitor.
